

Mid-West[®] Instrument

New Marketing Agreement
for **Averaging Pitot Tubes**

Mid-West[®] Instrument/**VERIS**

**Verabar
Flow Sensor**

Mid-West Instrument is pleased to announce that we have formed an alliance with VERIS Inc, www.veris-inc.com to supply their averaging pitot tubes in place of our Delta Tube.

Business in our core Differential Pressure products is continuing to grow at a phenomenal rate. Because of this, we are concentrating our focus on our differential pressure gauges, switches and transmitters. We have developed a strong following for our Delta Tubes and to accommodate these customers and allow our channels to expand their business in the flow measurement market sector we have joined up with VERIS to provide their products.

The transaction will remain the same with each of you contacting the Mid-West Instrument inside sales group with the flow information required to size your application. We will then promptly get back to you with a quotation and delivery on the unit as manufactured by VERIS.

We believe this agreement will allow you to service the existing customers you have developed for the Delta Tube and expand your business in flow measurement. By combining the efforts of Mid-West Instrument and VERIS we can now not only provide you with quality Differential Pressure Gauges, Switches and Transmitters but the Finest Flow Measurement Instruments in the market today.

Mid-West Instrument looks at this as a great opportunity for us to focus our resources on our base business and still grow our collective business in flow applications.
