Gauges with switches have one or two hermetically sealed adjustable set point reed switch assemblies. Load ratings and capabilities for each switch type are defined as follows:

REED SWITCH RATINGS (Resistive Load)

* Product of the switching voltage and current shall not exceed the power rating of the device.

The following warnings apply to all gauge options with electrical interface:

**WARNING:** ELECTRICAL CONNECTIONS SHOULD BE PERFORMED BY QUALIFIED PERSONNEL AND MEET THE REPRESENTATIVE COUNTRY’S NATIONAL ELECTRICAL CODE.

**WARNING:** FAILURE TO CONNECT TO THE PROTECTIVE CONDUCTOR TERMINAL MAY RESULT IN A SHOCK HAZARD.

**WARNING:** REMOVAL OR REPLACEMENT OF INSTRUMENT HARDWARE VOIDS ALL WARRANTIES AND CONFORMANCE TO ANY STANDARDS (EXCEPT COVERS AND/OR SWITCH ADJUST PLUG(S))

The SPDT switch (‘A’ Electrical Option) lead colors and associated functionality at ‘0’ PSID is shown in Figure 1. The SPDT switch is adjustable within the range of 10% to 90% F.S. To increase the set point rotate switch adjustment screw counter clockwise (CCW). Do not use excessive force when rotating the adjustment screw or the adjustment mechanism may be damaged.

Provide standard protection techniques for the switch contacts for capacitive and inductive loads. Use current limiting techniques near the switch to protect the contacts due to high inrush (i.e.: in line resistor or inductor) for long cable interfaces. Provide clamping devices at or near inductive loads (i.e.; relay). Maximum wire length between the 3W switch and its load, should not exceed 70 – 100 Feet for 120 VAC applications. Contact the factory for assistance regarding this condition.

Use the Mid-West Power Relay 1000TR or equivalent relay for loads above the switch rating.

**CONDULET ENCLOSURE (Standard) (Options H & I)**

The standard switch enclosure is a condulet with 1/2" FNPT interface. On orders that do not require wall or pipe mounting the flying leads exit the rear of the gauge. For the remaining orders the wires exit the side of the gauge You may re-route the wires out the back of the gauge by removing the switch access cover and relocating the condulet pipe plug to the side condulet port. See Fig. 2.

To access the switch adjustment screws, remove the cover from the condulet. Make adjustments as necessary using a screwdriver.

A provision to connect a protective conductor terminal is also provided. The Green / Yellow wire is provided for shock safety.

The 26 Awg., 300 Volt rated, flying leads are color coded and labeled as follows:

- White- 1 or 2 Com
- Black- 1 or 2 NC
- Red - 1 or 2 NO

Deviations from the above configurations may exist. Therefore check the description block of your order to verify your configuration.
DIN Plug-in Connector (Condulet Housing)  
(Options J & K)

WARNING: POSSIBLE ACCESSIBLE LIVE PARTS. REMOVE POWER PRIOR TO MAKING ADJUSTMENTS. USE AN OHM METER OR EQUIVALENT DEVICE TO MONITOR SWITCH CONTACTS WHILE MAKING ADJUSTMENTS.

The DIN interface conforms to DIN 43 650A / ISO 4400 and when mated provides an IP65 rated protection class. The right angle mating connector is supplied with the gauge upon order. Clocking (orientation) can be changed by prying out the insert and rotating the insert to the desired clocking (90° increments).

Wiring for the SPDT switch(es) is as follows:
1. - Common
2. - N.C.
3. - N.O.
4. - Chassis

For a single switch order the connector will be located out the side of the condulet housing. For a double switch order, two separate connector interfaces are provided on opposite sides of the condulet housing.

A protective conductor terminal is provided on the DIN connector.

NEMA 4X (Weatherproof Enclosure)  
(Options L & M)

The gauge and switches are mounted inside the enclosure with the switch(es) wired to a seven (7) position terminal strip. The terminal strip connection uses 6-32 screws and is rated for use with wire up to 14 Awg.. An opening is provided on the bottom of the enclosure for a 1/2" flexible cable or conduit connection.

Access the terminal strip by removing the cover from the enclosure and loosening the (4) screws. Insert wires through an appropriate weatherproof connector (not supplied) into the enclosure and connect to the terminal strip. See the terminal strip diagram shown below or on the outside of the switch enclosure. Reinstall the cover and (4) screws. See Figure 3.

Access holes and plugs are provided for external adjustment of the switches if required.

NEMA 7 (Explosion-proof) Enclosure  
(Options N & P)

WARNING: THE COVER AND/OR SWITCH ADJUST ACCESS PLUGS MUST NEVER BE REMOVED WHEN THERE IS POWER TO THE UNIT. MAKE ALL ADJUSTMENTS IN A NON HAZARDOUS AREA.

The gauge and switches are mounted inside the enclosure (see Fig. 4). A 1/2"-14 FNPT conduit connection is provided in the bottom side of the enclosure. A proper explosion-proof, dust tight sealing fitting with appropriate sealing cement must be used when making connections to the 24", 18 Awg. wire leads. The leads are labeled and/or color coded as described in the condulet section.

Adjustment of the set point can be accomplished by removing the switch adjustment access plug(s). Insert the screw driver through the hole into the switch adjustment slot and rotate until the desired set point is reached. Do not use excessive force. Reinstall the access plugs with at least 5 threads of engagement after completion.

Enclosures with SPDT switches comply with NEC Class 1, Groups C & D; Class 2 Groups E, F, & G, NEMA 7 and 9, and are CSA and UL listed.

TROUBLE SHOOTING
A. Switch doesn't function
   i. Make sure that the switch load does not exceed the specified wattage rating of the switch. (steady-state and transient). Contact factory for assistance for excessive loads, otherwise proceed to the next step.
   ii. Perform a continuity check of the switch contacts by trying to actuate the switch using an external magnet. An operational switch usually indicates a problem with the gauge. If not operational proceed to the next step.
   iii. Verify the reed switch wires are connected to the terminal strip (NEMA 4X enclosure only). Contact the factory for assistance if the switch is connected and/or request an "RGA".

B. Gauge accuracy and set point problems:
   i. Verify gauge is not in an electromagnetic/magnetic environment. i.e.; close proximity to high current power lines.
   ii. All others, contact the factory for assistance.
MOUNTING INFORMATION & DIMENSIONAL DATA

FIGURE 2
Model 130-S
Options: H & I

Installation Instructions:
1. Remove Lid
2. Install #10 Pan Head or ¼"Socket Head Screw and Mount to Panel. (Parts supplied by customer)

Double Switch Connections

Single Switch Connections

FIGURE 3
NEMA 4X Options L & M

Installation Instructions:
1. Remove Lid
2. Install #10 Pan Head or ¼"Socket Head Screw and Mount to Panel. (Parts supplied by customer)

Double Switch Connections

Single Switch Connections

NOTE:
1. DRAWINGS SHOW STANDARD GAUGE NOMINAL DIMENSIONS.
2. DIMENSIONS SHOWN IN PARENTHESES ARE IN MILLIMETERS.
