RoHS3 Directive 2015/863 Statement:

To our customers:

We are diligently working on compliance to the RoHS3 Directive 2015/863 which has a deadline of July 22, 2019 except for Categories 8 and 9 which have an additional 2 years for compliance. While our product alone falls into the Category 9 “monitoring and control instruments” we understand that does not preclude our customers from asking for RoHS3 compliance now. Unfortunately response has been very slow forthcoming from our suppliers regarding RoHS3. Therefore, presently we do not expect to say we are RoHS3 compliant by July 22, 2019.

For product that we have determined and continue to monitor for RoHS2 compliance we will continue to CE mark for compliance to the RoHS2 directive.

Please note that the RoHS Directive applies to Electrical and Electronic Equipment. Mid-West Instrument product which are classified as non-electrical are exempt from the requirements of the directive(s).
